

Consider the following code. Which of the two basic properties(border, padding) of panel will be missing if we directly write HTML elements inside the panel class?

```
<div class="panel panel-primary" >  
<h1>Panel</h1>  
</div>
```

- ☒ Padding
- ☐ Border
- ☐ Both of above
- ☐ None of above

Answer: Padding

Explanation: Padding inside panel is provided by panel-body, panel-heading or panel-footer classes. If none of them are used, then no padding will be applicable. Only border property will exist.
